**Dunlop Excellay® cushioning –
underfoot excellence in
heavy- traffic areas**

The constant heavy traffic flows in government, institutional and large commercial areas demand carpets that are exceptionally tough, yet still provide good levels of comfort. To achieve this, these carpets must be laid on a cushioning material that has exceptional properties.

Dunlop Excellay® cushioning has been specially designed to achieve Heavy Commercial classification in accordance with AS 4288 (Soft underlays for floor coverings) and therefore meets the demands of these particular environments.

Dunlop Excellay® is made from high density, bonded polyurethane foam, so it's tough and resilient enough to keep bouncing back under continual traffic loads, day after day, year-in year-out. And it still keeps coming back for more.

As a result it's perfect for use in buildings such as hospitals, hotels, schools, theatres, police stations and government offices. In fact, wherever a carpet is subjected to heavy, constant use, Excellay® is excellent carpet cushion to have under-foot.

The many excellent properties of Dunlop Excellay® Cushioning

Highly Resilient

Excellay® is highly resilient, so it helps the carpet to retain its comfort, shape and appearance for a significant period longer.

Ultra-Fresh® Health Protection

Excellay® is Ultra-Fresh® treated to inhibit bacterial and fungal growth, and to protect against germs.

Moisture Resistant

Excellay® has a very low moisture absorption factor so it is generally unaffected by dampness and spills.

Low-Allergenic

Excellay® is dust-free and odour-free, virtually eliminating any allergy risks.

Excellent Insulation

Because Excellay® is made from rebonded polyurethane foam, it ensures excellent thermal, sound insulation and transmission properties.

- For all types of floors and carpets including woven Axminster
- All-Australian Made
- CFC-Free

Excellay® is recyclable to minimise waste and help reduce re-laying costs

Unlike most ordinary carpet underlay products, Excellay® has been designed to meet the increasing trend to recycling within the policy guidelines of Federal and State governments.

Excellay® achieves this because it is totally recyclable into new carpet cushioning. At the end of its life-cycle it has a residual value to industry members such as carpet installers and retailers, who can return it to help reduce the cost of replacement into new carpet cushioning.

Dunlop Excellay® Installation Method

The smooth edge is installed then the Excellay® is laid on the floor and trimmed to fit.

The carpet is laid crosswise to the Excellay® Dunlop highly recommend the use of silicone hot melt seaming tape and the use of the Dunlop seaming board.

For best results the carpet is then fitted and tensioned.

Finishing touches such as door-edging and strips are added, for a smooth join to other carpets or surfaces.

Note: Excellay® is available as Excelac™ based on the Fastack™ System.

Ultra-Fresh®: a first step to a healthier interior environment

Recent scientific evidence has established that interior environments can be a major contributor to health problems. Dust mites in particular have been shown to be the cause of asthma, hayfever, bouts of sneezing and even eczema.

Dunlop is the first manufacturer of carpet cushioning in Australia to treat its products with the anti-microbial compound, Ultra-Fresh®. Laboratory tests show that Dunlop carpet cushioning treated with Ultra-Fresh® ensures effective, long term control of dust mites as well as the growth of destructive bacteria, moulds, mildew and fungi. Ultra-Fresh® also provides odour protection, increases hygiene and reduces staining.

Dunlop Excellay® at work

Dunlop Excellay® has been specified in many government, institutional and large commercial environments where the carpet must deliver high levels of comfort. At the same time it must perform at its best under continual, heavy-traffic conditions.

Excellay® is ideal for theatre and school environments.
